

GOD!

Proof of God's Existence

Farishta Maryam Satari, Ph.D. on behalf of Aaron Nowrouzie, D.Sc.

2015

1 Introduction

God is Allah, the One and Only One, the Indivisible! God the Eternal, the Ever Enduring, and the Absolute. God begets not, nor was God begotten. There is none like or comparable unto God. "There is no god but God!" Said Prophet Muhammad.

God is great!

God is the Creator of the universe says Islam, the most scientific religion in the world, yet there is no place for God in science.

Does God exist?

The author has logically deduced God's existence.

2 Background

Take the most scientific religion, Islam, and prove Allah.

"Allah is the Creator of the Universe!" Says Qur'an.

"Prove Allah!" Says science.

"How can man know if the universe is finite?" Asks Aaron.

"Man cannot observe beyond the visible universe! How can a woman prove Allah's existence?" Reasons Farishta.

"If I can mathematically prove my existence, then I can logically deduce the existence of the Creator." Continues to reason Farishta.

Farishta Satari's Existential Theorem states: "I was because I still am; 'I am,' therefore I shall be." [1]

3 Proof by Logical Deduction

The author claims “I exist, therefore God exists!”

1. All masses with energy are created by Allah.
2. Aaron exists as mass having energy.
3. Therefore, Aaron is Allah’s creation.

The author has proved God’s existence using logical deduction.

4 Summary

From the Source I come and back to the Source I go.

5 About the Author

Farishta Satari is a doctor of philosophy and a technology leader specializing in big data and analytic platforms. She obtained her Ph.D. in computer science from City University of New York in 2013. Her research is in the field of logical artificial intelligence: A broad research area at the intersection of computer science, logic, philosophy of language, linguistics, psychology, and economics.

Aaron Nowrouzie is a five years old man. He is a young scholar, cyclist, swimmer, pianist, sketch artist, photographer, game engineer, and martial artist.

6 Acknowledgments

All credit is due to Aaron Nowrouzie, for being a man of words. The author demands an honorary doctorate degree issued in his name for being the first human being to scientifically question the foundation of science and mathematically bring God into Science.

Aaron Nowrouzie, the first and the last Scientist.

8 Abstract

On the foundation of science, a theory called Big Bang states, “In the beginning there was an atom size of mass with massive energy, it exploded into what we know as the universe.”

First seconds after Big Bang, it was the birth of subatomic particles. Approximately 380,000 years later, the electrons and nuclei combined into atoms. Approximately 300 million years later, began the formation of the stars and galaxies. Approximately 9 billion years later, began the formation of the solar systems.

Astronomy being the oldest science, the first observations of the heavens conducted by humans on planet Earth, date back as far as nearly 5000 years ago. The last 1000 years, was the age of science, transforming human understanding of the universe with development of theories such as the Big Bang.

Fortunately, no scientist in the world could turn the Big Bang theory into a theorem.

It took 13.77 billion years for intelligent life to be born on planet Earth. On August 10, 2009, Aaron Nowrouzie was born. Following a scientific method, Aaron Nowrouzie reasoned, “With the telescopes only the visible universe can be discovered; what lies beyond the visible universe is dark universe.” Aaron Nowrouzie scientifically questioned the foundation of science by asking, “What Power created the atom size of mass with massive energy?”

Galileo Galilei and Isaac Newton seem to have been defeated by Aaron Nowrouzie’s question on one of the foundational theories of science.

Aaron Nowrouzie is an influential person. His history may be recorded between 2009 and 2015, during the years when he brought science down. Aaron Nowrouzie earned himself an Honorary Doctor of Science title by age five. Aaron Nowrouzie’s work should be cited in every book of science next to the mention of a theory called Big Bang.
